

To whom it may concern

Recommendation of Jonathan Fonager Larsen

May 26, 2026

I am writing to recommend Jonathan, whom I supervised during his bachelor's thesis on the pricing of American options. Through this project, Jonathan demonstrated a high level of academic ability and maturity in his approach to independent research.

Universitetsparken

5

DK-2100 København Ø

The topic of American option pricing requires a strong command of probability theory, stochastic processes, and financial economics. Jonathan consistently showed both technical competence and an intuitive understanding of the underlying economic and mathematical principles. He was able to apply advanced methods correctly and interpret results in a meaningful and economically sensible way.

Throughout the project, Jonathan was a diligent and motivated student. He approached the work with discipline and consistently maintained high academic standards. He worked independently and was always well-prepared for supervision meetings.

Jonathan is curious and seeks to understand the structure of the models and methods he works with. This often led him to explore ideas beyond the requirements of the thesis. In addition, his graduate-level coursework in economics has been completed with excellent results.

Jonathan also shows strong ambition and a clear drive to develop his academic abilities further. He sets high standards for his own work and is not easily satisfied with partial understanding or incomplete solutions.

Overall, I consider Jonathan to be a very strong candidate for scholarships supporting his upcoming internship at the OECD, and I recommend him without hesitation.

Best regards,
Nina Lange
